

```
1 Resources:
2   MyS3Bucket:
3     Type: AWS::S3::Bucket
4     Properties:
5       BucketName: !Sub "intellipaat-rabeeh"
6       VersioningConfiguration:
7         Status: Enabled
8
```

Step 1

● Create stack

○ Step 2

○ Step 3

○ Step 4

Specify stack details

Configure stack options

Review and create

### Create stack

**Prerequisite – Prepare template**

You can also create a template by scanning your existing resources in the [IaC generator](#).

**Prepare template**

Every stack is based on a template. A template is a JSON or YAML file that contains configuration information about the AWS resources you want to include in the stack.

☒ Choose an existing template  
Upload or choose an existing template.

☐ Build from Infrastructure Composer  
Create a template using a visual builder.

**Specify template** Info

This [GitHub repository](#) contains sample CloudFormation templates that can help you get started on new infrastructure projects. [Learn more](#)

**Template source**

Selecting a template generates an Amazon S3 URL where it will be stored. A template is a JSON or YAML file that describes your stack's resources and properties.

☐ Amazon S3 URL  
Provide an Amazon S3 URL to your template.

☒ Upload a template file  
Upload your template directly to the console.

☐ Sync from Git  
Sync a template from your Git repository.

**Upload a template file**

rabi.yaml

JSON or YAML formatted file

S3 URL: <https://s3-us-east-1.amazonaws.com/cf-templates-1ktxgsv9kwce-us-east-1/2025-02-02T073003.7512079-rabi.yaml>
